

At ~\$35, IREN is priced for modest erosion. Beyond it, value falls quickly.

The price allows for ~11% of the pricing gain reversing, against ~4% in the 2 October deck at ~\$42. Beyond that, GPUs lasting 4½ years with a fifth of the gain reversed would take value to ~\$19. For reference, the same model yields ~\$44 a share if today’s pricing, utilization and financing persist.
